

# MF41-6043 MF41-6083 Series

#### SmartX Actuators - Electric Dampers Non-Spring Return Rotary 24 Vac – Floating Control

#### **General Instructions**

## Description

These direct coupled 24 Vac Non-Spring Return rotary electric SmartX Actuators are designed for three-position (floating) control of dampers.

## Features

- Compact, lightweight design
- Manual override
- Manual override
- 5° preload as shipped from factory
- Plenum cabling
- Feedback potentiometer models available
- cUL and UL listed; plenum versions also CE certified
- Independently adjustable dual auxiliary switches available

# Applications

These actuators are used in constant or variable air volume installations for control of HVAC dampers requiring up to 44 lb-in (5 Nm) torque or 88 lb-in (10 Nm).

# **Product Numbers**

Torque	Cabling	24 Vac Operating Voltage			
		Standard	Slope/Offset Adjustable	Dual Auxiliary Switches and Slope/Offset Adjustable	Dual Auxiliary Switches Only
44 lb-in (5 Nm)	Plenum	MF41-6043	—	—	—
88 lb-in (10 Nm)	Plenum	MF41-6083	MF41-6083-520	MF41-6083-522	MF41-6083-502

Warning: Personal injury or loss of life may occur if you do not follow a procedure as specified.

Caution: Equipment damage or loss of data may occur if you do not follow a procedure as specified.

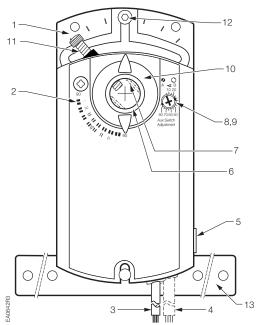

Specifications	Operating voltage $(0, 1/1, -\pi, 0, 1/0)$	$24 \sqrt{22} + 200/ = 150/$			
Specifications	Operating voltage (G–Y1 or G-Y2):	24 Vac +20%, -15% 50/60 Hz			
	Frequency:	50/60 HZ			
Power Supply	Power consumption:	2.3 VA			
Auxiliary Features	Feedback potentiometer:	0 to 1000 Ω			
	(MF41-6083-510)	<10 mA			
	Dual auxiliary switch contact rating:				
	AC rating	24 Vac			
	DC rating	4A resistive, 2A inductive DC 2A			
	DC 2A				
	Switch Range				
	Switch A Recommended range usage Factory setting	0° to 90° with 5° intervals 0° to 45° 5°			
	Switch B Recommended range usage	0° to 90° with 5° intervals 45° to 90°			
	Factory setting	85°			
	Switching hysteresis	2°			
		_			
Function	Torque:				
	MF41-6043	44 lb-in (5 Nm)			
	MF41-6083 Series	88 lb-in (10 Nm)			
	Runtime for 90° opening or closing:				
	MF41-6043	90 seconds. at 60 Hz			
		(108 seconds at 50 Hz)			
	MF41-6083 Series	125 seconds at 60 Hz			
		(150 seconds at 50 Hz)			
	Nominal angle of rotation	90°			
	Maximum angular rotation	95°			
Mounting	Shaft size:	Minimum shaft length 3/4-inch (20 mm)			
Housing	Enclosure	NEMA Type 2			
		IP54 according to EN60529			
	Material	Durable plastic			
	Gear lubrication	Silicone-free			
Ambient	Ambient temperature:				
Conditions	Operation	-25°F to 130°F (-32°C to 55°C)			
	Storage and transport	-40°F to 158°F (-40°C to 70°C)			
	Voltage Requirements for 6083 Series at High Temperatures:				
	Minimum Voltage:	24 Vac +20%, -10%			
		90°F to 130°F (32°C to 55°C)			

## **Specifications (cont.)**

Agency Certification		UL 873	
		cUL certified to Canadian	
		Standard C22.2 No. 24-93	
CE Conformity	Electromagnetic Compatibility (EMC)	89/336/EEC	
	Emissions standards	EN 61000-6-3:2001	
	Immunity standards	EN 61000-6-2:2001	
	Requirements for electric actuators	EN 60730-2-14:2001	
Miscellaneous			
	Pre-cabled connection	18 AWG	
	Cable length	3 feet (0.9 m)	
	Life cycle	Five-year warranty	
	Dimensions	See Figure 8	
	Weight	1.06 lb (0.48 kg)	

#### Actuator Components

#### Legend

- 1. Base plate
- 2. Positioning scale for angle of rotation
- 3. Connection cables
- 4. Connection cables
- 5. Manual override
- 6. Coupling bushing
- 7. 1/2-inch guide
- 8. Auxiliary switch A
- 9. Auxiliary switch B
- 10. Position indicator
- 11. Adjustment lever with locking screw (4 mm hex)
- 12. Set screw for mechanical range stop (3 mm hex)
- 13. Anti-rotation bracket

**Operation** A floating control signal controls the damper actuator. The actuator's angle of rotation is <sup>4</sup> proportional to the length of time the signal is applied. A 24 Vac control signal to wires 1 and 6 (G-Y1) causes the actuator coupling to rotate clockwise. A 24 Vac control signal to wires 1 and 7 (G-Y2) causes the actuator coupling to rotate counterclockwise.

To reverse the direction of rotation, the wires 6 and 7 (Y1 and Y2) can be interchanged.

In the event of a power failure or with no control voltage, the damper actuator holds its position.

#### Life expectancy

An improperly tuned loop will cause excessive repositioning that will shorten the life of the actuator.

## Dual Auxiliary Switch

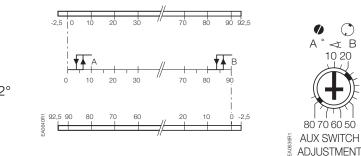

Figure 3 shows the adjustable switching values for the auxiliary switches A and B.

Actuator Scale: clockwise Adjustment range for Switches A and B

Setting interval: 5° Switching hysteresis: 2°

Actuator Scale:

counterclockwise

#### Figure 3. Adjustable Switching Values for the dual auxiliary Switches.

#### Notes:

- The auxiliary switch setting shafts rotate with the actuator. The scale is valid only when the actuator is in the "0" position on clockwise motion.
- For the counterclockwise rotation, the adjustment lever has to move from 90° to 0° by using the manual override and then adjust the auxiliary switches. After the auxiliary switches are adjusted, the adjustment lever has to move back to the 90° position.
- Use the long arm of the X to point to the position of switch A. Use the narrower tab on the red ring to point to the position of switch B.

Sizing

- The type of actuator required depends on several factors.
- 1. Obtain damper torque ratings (ft-lb/ft2 or Nm/m2) from the damper manufacturer.
- 2. Determine the area of the damper.
- 3. Calculate the total torque required to move the damper:

SF<sup>1</sup>

<sup>1</sup>Safety Factor: When determining the torque of an actuator required, a safety factor should be included for unaccountable variables such as slight misalignments, aging of the damper, etc. A suggested safety factor is 0.80 (or 80% of the rated torque). 4. Select the actuator type from Table 2.

Total Torque	Actuator
44 lb-in (5 Nm)	MF41-6043
88 lb-in (10 Nm)	MF41-6083 Series

Table 3.

## Mounting and

**Installation**You must place the actuator on the damper shaft so that the front of the actuator is accessible The label is the front side.

The minimum damper drive shaft length is 3/4-inch (20 mm).

**Note:** For all damper shafts with the exception of the 1/2-inch round shaft: Remove 1/2-inch diameter guide before installation

#### Figure 4. Damper Shaft Sizes.

- An anti-rotation bracket is included with the actuator.
- Observe the service envelope around the actuator as shown in Figure 8.
- For detailed mounting instructions, see Installation Instructions F-27211.

# Manual override

To move the damper blades and lock the position with no power present:

- 1. Slide the red manual override knob toward the back of the actuator.
- 2. Make adjustments to the damper position.
- 3. Slide the red manual override knob toward the front of the actuator.

Once power is restored, the actuator returns to automated control.

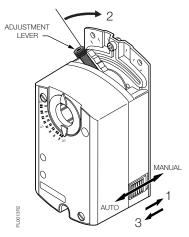

Figure 5. Manual Override.

#### Mechanical range adjustment

To mechanically limit the range of the damper blade.

- 1. Loosen the stop set screw.
- 2. Move the screw along the track to the desired position, and fasten it in place.

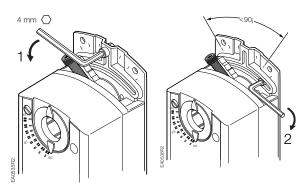

Figure 6. Moving the Mechanical Range Stop.

Wiring

All wiring must conform to NEC and local codes and regulations. Use earth ground isolating step-down Class 2 transformers. Do not use autotransformers.

The sum of the VA ratings of all actuators and all other components powered by one transformer must not exceed the rating of the transformer. It is recommended that one transformer power no more than 10 actuators.

*Caution:* Do not wire different types of actuators (such as MS/MF41-6153 Series) in parallel with these models.

**Warning:** All six outputs of the dual auxiliary switch (A and B) must only be connected to: Class 2 voltage (UL/C-UL).

Separated Extra-Low Voltage (SELV) or Protective Extra Low Voltage (PELV) (according to HD384 4 41) for installations requiring CE conformance. You must use a CE certified plenum actuator.

Warning: Installations requiring CE Conformance:

- All wiring for CE certified actuators must only be separated extra low voltage (SELV) or protective extra low voltage (PELV) per HD384-4-41.
- Use safety-isolating transformers (Class III transformer) per EN61558. They must be rated for 100% duty cycle.
- Overcurrent protection for supply lines is maximum 10A.

## Direction of damper

rotation

To reverse the direction of rotation, wires 6 (violet) and 7 (orange) can be interchanged.

## Wire Designations

Each wire has the standard symbol printed on it.

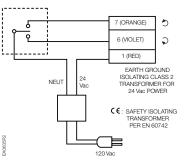

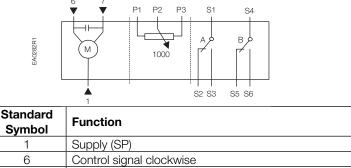

Figure 7. Three-position Control.

### Wire Designations Continued

1	Supply (SP)	Red		
6	Control signal clockwise			
7	Control signal counterclockwise	Orange		
Factory-installed options				
S1	Switch A Common			
S2	Switch A N.C.			
S3	Switch A N.O.			
S4	Switch B Common			
S5	Switch B N.C.			
S6	Switch B N.O.	Black		
P1	Feedback Potentiometer			
	0 to 100% P1 - P2			
P2	Feedback Potentiometer Common			
P3	Feedback Potentiometer 100 to 0% P3 - P2			

# Start-Up/

Commissioning Check that the w Digital Multimete

Check that the wires are connected correctly. Connect wires 1(red) and 6 (violet) to a Digital Multimeter (DMM) with the dial set at Vac. Apply a control signal (24 Vac) to wires 1 and 6 to verify that the operating voltage is within range. Connect wires 1(red) and 7 (orange) to a DMM with the dial set at Vac. Apply a control signal (24 Vac) to wires 1 and 7 to verify that the operating voltage is within range.

- 1. Check operation:
  - a. Connect wire 1 (red) to the actuator.
  - b. Apply a control signal (24 Vac) to wires 1 (red) and 6 (violet).
  - c. Allow the actuator shaft coupling to rotate from 0° to 90°.
  - d. Stop applying a control signal to wires 1 (red) and 6 (violet).
  - e. Apply a control signal (24 Vac) to wires 1 (red) and 7 (orange).
  - f. Allow the actuator shaft coupling to rotate from 90° to 0°.
- 2. Check Feedback:
  - a. Set the DMM dial to ohms.
  - b. Connect wires P1 and P2 to the DMM. The DMM should indicate a resistive value.
  - c. Apply a control signal (24 Vac) to wires 1 (red) and 6 (violet). The reading of the DMM should increase.
  - d. Connect wires P2 and P3 to the DMM. The DMM should indicate a resistive value.
  - e. Apply a control signal (24 Vac) to wires 1 (red) and 7 (orange). The reading of the DMM should increase.
- 3. Check Auxiliary Switch A:
  - a. Set the DMM dial to ohms (resistance) or continuity check.
  - b. Connect wires S1 and S3 to the DMM. The DMM should indicate an open circuit or no resistance.
  - c. Apply a control signal (24 Vac) to wires 1 (red) and 6 (violet). The DMM should indicate contact closure as the actuator shaft coupling reaches the setting of switch A.
  - d. Stop applying a control signal to wires 1 (red) and 6 (violet).
  - e. Connect wires S1 and S2 to the DMM. The DMM should indicate an open circuit or no resistance.
  - f. Apply a control signal (24 Vac) to wires 1 (red) and 7 (orange).
  - g. The DMM should indicate contact closure as the actuator shaft coupling reaches the setting of switch A.

F-27213-3

Color

## Start-Up/ Commissioning Continued

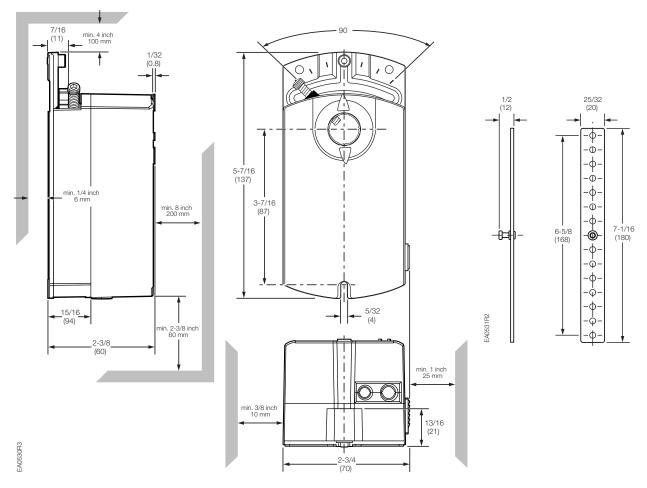

4 Check the Auxiliary Switch B:

- a. Set the DMM dial to ohms (resistance) or continuity check.
- b. Connect wires S4 and S6 to the DMM. The DMM should indicate an open circuit or no resistance.
  - c. Apply a control signal (24 Vac) to wires 1 (red) and 6 (violet). The DMM should indicate contact closure as the actuator shaft coupling reaches the setting of switch B.
  - d. Stop applying a control signal to wires 1 (red) and 6 (violet).
  - e. Connect wires S4 and S5 to the DMM. The DMM should indicate an open circuit or no resistance.
  - f. Apply a control signal (24 Vac) to wires 1 (red) and 7 (orange) The DMM should indicate contact closure as the actuator shaft coupling reaches the setting of switch B.

#### Service

Warning: Do not open the actuator. If the actuator is inoperative, replace the unit.

## Dimensions
